

Customized Training

WMD (Weapons of Mass Destruction) Awareness

This training provides specific awareness of the unique security problems associated with the proliferation of WMD. Federal, state and local officials will all benefit from these critical concepts, especially those with managerial responsibilities for early detection and quick response. Preparation is vital when it comes to the unprecedented threats of chemical, biological and nuclear agents and instructors explore the roles, responsibilities, policies and procedures necessary to maintain regional, national and international security. For foreign audiences, the focus will be split between understanding the magnitude of the proliferation threat and the obligation of their country to improve their national capability to combat these dire challenges. Note: On the third day, participants will be engaged in practical exercises using hand held detection devices. The course will feature a variety of teaching techniques to increase attentiveness and boost retention. Participants will learn the critical fundamentals, including:

- **Why** is this critical to your organization?
- **What** should happen in each department for the system to be effective overall?
- **Who** performs the respective tasks? How are their efforts coordinated and updated?
- **When** should things happen to boost effectiveness and efficiency?
- **How** are these tasks to be performed? What are the methods and metrics?

Why Choose CTP Training Services?

- Over 16 years, CTP has developed over 100 training modules based on U.S. and international best practices.
- We can utilize our existing modules for specific purposes or combine and customize them to make a customized corporate/organizational program that we deliver at multiple locations domestically and/or internationally. This is a cost effective way to deliver specific programs or large training initiatives without having the permanent overhead of a large training department.
- To meet specific training objectives, CTP combines lectures with practical hands-on training exercises and computer-based job aids, based on the adult learning principles of Instructional Systems Design.
- CTP's training modules include hundreds of practical interactive exercises—computer and paper based—consisting of over 1,000 questions that are used to reinforce specific training objectives.

Customized Training

Technical Expertise:

Not only do we have deep experience in these areas, several of our experts worked formerly within the government where they authored key segments of the existing regulations and technical guidelines.

This course is designed for experts within Federal, State or local organizations who are responsible for preventing, preparing, responding or recovering from such collective security threats such as those posed by the proliferation of WMD.

Instructional System Design (ISD):

ISD is based on modern theories of adult learning, first distilling the critical knowledge, skills, and abilities of each subject area then developing targeted materials and delivery techniques using a combination of real-world case studies, field exercises, and interactive computer-based programs.

The objective is to imbue each training project with a customized methodology that is tailored to client-specific goals. ISD methodologies are considered to be state-of-the-art in adult learning today.

About CTP:

CTP has deployed customized training solutions in over sixty countries.

Our government clients know us best for our subject matter experts and innovative use of Instructional Systems Design (ISD) techniques.

Much of our work is overseas, working in conjunction with U.S. embassies, foreign governments and NGOs.
